

**Iluka Resources Limited- Balranald Mineral Sands Mine
Monthly Particulate Monitoring (PM2.5 and PM10)**

The below air quality monitoring results have been obtained in accordance with the Balranald Mineral Sands Mine Air Quality Management Plan and assessed against the air quality criteria outlined in Table 4 of the NSW Development Consent SSD-5285.

Table 4- Short term impact assessment criterion for particulate matter		
Pollutant	Averaging period	Criterion
Particulate matter < 10µm (PM10)	24 Hour	50 µg/m ³
Particulate matter < 2.5µm (PM2.5)	24 Hour	25 µg/m ³

The monitoring station recorded only one (1) exceedance day in particulate levels throughout the month. Upon analysis, this exceedance was determined to be not caused by the site-specific activities. Detailed information can be found in below Table.

Figure 1 and 2 represents the 24-hour average PM2.5 and PM10 performance in October 2025 respectively against the limits as mentioned in Table 4.

Please see the comment section of the individual days for detailed information in the table below.
